

FREE BONUS: BUILD YOUR OWN SURVEY WEBSITE

Copy and paste the entire prompt below into ChatGPT. It will ask for your survey name, offer, optional personal information and photo, and your own affiliate or digital-product link.

ACT AS MY WEBSITE BUILDER

Build a polished, mobile-friendly, interactive survey website that I can share with people who are interested in my affiliate product, digital product, or independent business opportunity. I am a beginner, so keep everything easy to use. The finished website must be personalized to ME, not to the person who originally created this prompt.

STEP 1 — ASK ME THESE 6 SETUP QUESTIONS FIRST

Ask them ONE AT A TIME. Wait for each answer before asking the next. Do not start building until I have answered all six. Let me type "skip" for any optional item.

1. SURVEY NAME: What would you like to call your survey or website? Ask if I also want a short headline or tagline; create a good one if I do not have one.
2. MY OFFER AND AUDIENCE: What affiliate product, digital product, course, or legitimate business opportunity am I sharing, and who is it intended for? Ask for a short, accurate description. Do not invent product facts, earnings, costs, or testimonials.
3. ABOUT ME (OPTIONAL): What name would you like displayed? Would you like a short personal introduction or background? If I skip this, use a friendly, brand-neutral introduction without pretending to be a person.
4. MY PHOTO (OPTIONAL): Would you like to upload a picture of yourself for the top of the page? If yes, ask me to attach/upload it, then use that image. If no, design the page without a photo. Never replace me with a made-up person's picture or an AI-generated likeness.
5. MY DESTINATION LINK (REQUIRED): What is the full https:// URL to the affiliate offer, product checkout, landing page, or presentation I want people to visit AFTER they complete the survey? Check that it starts with https:// or http:// and show it back to me for confirmation. This is the only required setup item besides the survey name and offer description. Do not use a placeholder URL in the final delivered website.
6. STYLE (OPTIONAL): What colors or style do you want? If I have no preference, use an attractive dark background, bright accent color, high contrast, large readable text, and clean professional buttons. Ask whether I want a "2-minute survey" label; only use that if the number and length of questions make it a reasonable description.

STEP 2 — BUILD THE COMPLETE SURVEY WEBSITE

- Create a beautiful landing page with MY survey name, my approved offer description, and (only if provided) my name, intro, and actual uploaded photo.
- Use this survey for general flow inspiration, without copying its branding or specific claims: <https://dgcsurvey.underpar32.workers.dev/>. If that link cannot be opened, follow these instructions without delaying the build.
- Make the website look trustworthy on phones and desktops. Use a prominent "Start the Survey" button, a progress bar, large buttons, clear navigation, and consistent spacing.

- Include a brief, visible disclosure BEFORE the survey: "This is a survey about an independent product or business opportunity, not a job application or an offer of employment. Completing it does not guarantee income or results." Adapt the wording truthfully if I am promoting a product rather than a business opportunity. If I may earn a commission, include a clear affiliate disclosure.
- Build 10 short, conversational, multiple-choice questions that fit MY audience and MY offer. Ask ONE question per screen. Use a progress indicator (Question 1 of 10 through Question 10 of 10), Next and Back controls, and a clear way to finish. Choose relevant, non-sensitive questions such as goals, experience level, topics of interest, time available, preferred learning style, budget comfort (if relevant), and what type of solution they want. Do not ask for Social Security numbers, passwords, payment-card details, or other sensitive information.
- Make the survey functional: answers can be selected, the user can move back and change answers, and the last answer leads to the finish screen. Do not display fake results, fictional qualification scores, or promises of approval.
- IMPORTANT: After a visitor completes all 10 questions, show a short "Thanks for completing the survey" screen with a large button labeled "See the Next Step" or "View the Product". That button must open MY confirmed destination URL. Also automatically redirect to that SAME link after about 3 seconds, with the visible button as a fallback. Do not silently route people somewhere different.
- Do not force visitors to provide a name, email address, phone number, or payment information. By default, do not collect, transmit, or store visitors' survey responses. This can be a front-end-only survey; explain clearly that without a database, submissions are NOT saved or emailed to me. Only add email collection, response storage, or alerts if I explicitly request them later and the required backend is actually configured.
- Keep all wording truthful and clear. Do not portray a commission-based business opportunity as salaried employment, imply guaranteed earnings, invent testimonials, or state unverified results.
- Include a simple footer with my display name/brand (if provided), a suitable affiliate disclosure if applicable, and a basic privacy explanation saying the default survey does not store answers.

STEP 3 — DELIVER THE FILES AND MAKE SETUP SIMPLE

- Generate a COMPLETE, working website using HTML, CSS, and JavaScript. Prefer a self-contained index.html so it works with simple static hosting. Make sure any image I upload is included correctly, not linked to a private or temporary chat attachment.
- If file-generation tools are available, give me a downloadable ZIP containing index.html and any required image files. Also include a README.txt with exact step-by-step instructions to publish the ZIP using Cloudflare Pages Direct Upload (no coding, database, or command line required).
- If you cannot generate a ZIP, provide the FULL code in clearly marked files and tell me exactly how to save and upload them. Do not say the site is live unless it has actually been deployed and verified.
- Before finishing, check that the survey name is mine, my uploaded photo (if any) appears, all ten questions work, the progress indicator updates, the design works on mobile, and the final destination link is EXACTLY the URL I gave you.
- Do not ask extra questions unless something essential is missing. Make reasonable design decisions and complete the website.

START NOW BY ASKING ME QUESTION 1: What would you like to name your survey website?
